Y.C. explosive triggered slide

Yellowstone Club Northern Madison 3/3/2019 Code HS-ABc-R2-D2-G Elevation 7280 Aspect NW Latitude 45.22980 Longitude -111.41200 Notes

"The YC Ski Patrol conducted avalanche mitigation work above another one of our roads today. The area is outside of our ski area boundary and receives no skier traffic. A 4lb explosives charge was detonated from an aerial tram and triggered a R2/D2 avalanche that ran to the ground. The crown was 2', the path width was around 100', and it ran 350 vertical feet (crossing the road) to the bottom of the <u>runout zone</u>. The elevation was 7280' on a NNW <u>aspect</u> and max slope angle of 34 degrees. Other sections of this slope were tested with explosive charges, yielding only black holes." Photos and observation courtesy YC Ski Patrol.

Number of slides 1 Number caught 0 Number buried 0 Avalanche Type Hard slab avalanche Trigger An explosive detonated above the snow surface (air blast) **Trigger Modifier** c-A controlled or intentional release by the indicated trigger R size 2 D size 2 **Bed Surface** G - Ground Problem Type Persistent Weak Layer Slab Thickness 24.0 inches Vertical Fall 350ft Slab Width
