

Many Natural Wet Loose Avalanches in Frazier

Frazier Basin

Bridger Range

4/20/2020

Code

WL-N-R2-D1.5-I

Elevation

9000

Aspect Range

SE-E

Latitude

45.92330

Longitude

-110.98000

Notes

In Frazier, all surfaces except the upper north faces were getting wet and sticky. We observed lots of wet loose avalanches actively happening on SE-E facing slopes. There was one small crown on a steep East facing slope that looked to be from the most recent storm but everything else was loose wet. Small wind slabs from the last snow seemed to be glued down today.
