Activity

Skiing

Broke loose a slide just below the radio tower standing above the crown. Broke about 30 cm down on a layer of weak snow.

Also saw very unstable snow pack at the top of the main gully below the radio tower, large cracking and settling. Snow propagated across but came to a stop before a slide began. Large chunks of snow and debris broken off from the cornice to above main gully.

Region

Cooke City

Location (from list)

Miller Mtn.

Observer Name

Brock
