

Signs of stability at BBowl

Date

Tue, 04/30/2024 - 13:55

Activity

Skiing

Toured up to Bradley's Meadow, and found about 6 inches of moderate density snow sitting on a thin M/F crust with wet snow underneath the pack.

Snow seemed well bonded and did not see any natural slides up on ridge. Not much sun was out, and it was snowing until 12 p.m.

Region

Bridger Range

Location (from list)

Bridger Bowl

Observer Name

M. Standal
