

Lick creek obs

Date

Tue, 12/17/2024 - 13:00

Activity

Skiing

Dug a pit on the east facing slope around 7800'. The snow was 60 cm deep. We got ECTN11 and CT12 RP 15cm down on the old/new snow interface, ECTN16 25cm and CT19 25cm down on a crust.

Also dug a hand pit on a south slope at 6800' to test the new snow and it didn't break easily or cleanly.

We didn't observe any whumphing or cracking.

Region

Northern Gallatin

Location (from list)

Lick Creek

Observer Name

Heather Myers
