

Wet loose in northern bridgers

Date

Sat, 04/19/2025 - 10:20

Activity

Skiing

Meant to submit this yesterday (4/18), saw this one wet loose slide that naturally started off some rocks. Decent size by the bottom. Other than that, just some spiff. Surprisingly didn't see any big wind slabs trigger, despite the widespread wind effect in the northern Bridger's. Lots of wind scour on southerly aspects. Northern aspects had wind loading.

Region

Bridger Range

Location (from list)

Fairy Lake

Observer Name

William Landrey
